Hot Water: Rheem instantaneous system

Easy Online Colour Selection Process

Our Interior Design team has carefully curated a range of interior and exterior schemes, offering you a perfect and proven colour combination. With the Essence package, there's no need to compromise on quality, materials, or inclusions - simply select a scheme, and we'll take care of the rest.

Grey Exterior Scheme

Urban Interior Scheme

A clean and striking palette with an urban edge, featuring warm timbers like Natural Oak and Prime Tassie Oak to soften the look. Pair effortlessly with whites, neutrals and soft greys for a refined, contemporary finish.

Objective

To deliver an all-encompassing process that reduces contract to site start time by integrating class leading designs and professionally prepared colour schemes.

Key Benefits

- Effortlessly create a vision for your home without the worry usually associated with countless options
- Reduce contract preparation and construction start time frames from months to weeks*

Your part in the process

- Select one of our designs and advise any non-structural modifications.
- Select from predetermined schemes and appliance options.
- Provide land title and any relevant information.

Preliminary Works Agreement to Building Permit

1. You sign the Preliminary Works Agreement, pay your deposit and provide information as per section 12.1 of PWA.
2. Plans and Engineering: We initiate plans including the floor plan, siting, joinery & wall tile elevations, as well as electrical plans. If the site is accessible we will action preliminary site engineering.
3. Colour schemes: Select from our range of carefully prepared colour schemes and fitting selections via our online portal.
4. Review Initial Plans: You review the plans and siting with Tom for confirmation. Please note once you sign off the drawings they progress onto architectural drafting and structural engineers so no further changes can occur from this point.
5. Electrical: You review your electrical plan and advise if you want any additions which will be costed and presented for your approval.
6. Working Drawing Checks: We perform our quality control checks of the working drawings and apply the completed engineering information before the plans go back to the architectural drafting team for completion.
7. Variations: We prepare your final Pre-Contract Variation & contract sum, including confirmation of the 7 star requirements and final site costs based on the energy assessment and final engineered slab design.
8. Building Contracts: We prepare the Fixed Price Building Contract and specification and present it to you for signing via electronic DocuSign. We will also request you nominate the preferred Building Surveyor and request payment of the Initial contract deposit.
9. Building Permits: We lodge your plans and supporting documents with the Building Surveyor and local council for approval.
10. Works Commence.

*Construction start date subject to land and title availability.

Predetermined schemes to streamline the process

Electronically sign building contracts

Reliable Partnerships

With 40 years of local building experience and strong ties within our community, we create homes of exceptional value. Our unrivaled connection with the local market enables us to deliver your home on time and on budget. As proud members of MBAV and HIA, we are committed to providing inspiring homes tailored to local living needs.
